Kansas Division of Emergency Management

Building sustainable capabilities across
all phases of Emergency Management
in Kansas through selfless service

Comprehensive Resource Management and Credentialing System (CRMCS)

CRMCS Benefits

Top Ten benefits provided by the CRMCS...

1. Personnel accountability
2. Resource identification
3. Resource reliability due to FEMA ,NIMS, and State typing standards
4. Situational awareness of an incident via InterTRAX exchange
5. Sharing of the workload by allowing usernames and passwords for individual agencies or organizations to update their own data
6. Quick visual reference of deployable resources with ties to Kansas-MAP and its closest resource tool
7. Medical certification / license / registration verification through K-SERV
8. A sunflower decal on drivers license to identify system members
9. Helps facilitate mutual aid
10. Accessible from anywhere with an internet connection

Project Overview

The Kansas Division of Emergency Management, in coordination with the Kansas Homeland Security Regional Councils, launched the Comprehensive Resource Management and Credentialing System (CRMCS) in September 2011. The project was developed to credential and provide accountability of personnel and equipment during emergencies.

KDEM worked with Midwest Card and ID Solutions to create the **resourceMGR web™** (RMW) database to house the personnel and equipment information. Resources in the RMW system will be typed by the FEMA Tier I NIMS standards. Assets that fall outside those standards will be identified and given state specific Tier II types as defined by the subject matter experts in the appropriate discipline / Emergency Support Function (ESF).

InterTrax Exchange is a web based tracking system that allows those with appropriate permissions the ability to track, in near real time, the people and assets on scene at an incident. Post-incident reports can be generated in InterTRAX Exchange to assist in reimbursement efforts.

Coordination

CRMCS provides integration between other systems, listed below, to provide Kansas with a true comprehensive view of resources and capabilities in the state.

Kansas-MAP- After much hard work and coordination with the Emergency Support Function (ESF) partners we were able to finalize state level equipment standards. The definitions and qualifications for this equipment allow for a connection with the State's GIS mapping system, Kansas- MAP. The

integration between Kansas- MAP and RMW creates a powerful tool for initiating mutual aid. After identifying a resource as deployable in RMW, the resource can be found on the map using the "Closest Resource Tool". The search provides location, cost, and contact information for deployable resources across the state. This provides the potential to save lives and prevent damage to property by identifying and deploying the resources more rapidly.

Kansas Department of Revenue (KDOR)- RMW is connected to the KDOR database so that people loaded into RMW will be able to get a special sunflower decal on their drivers license to provide additional identification on-scene at an incident.

K-SERV- RMW is also connected to the Kansas System for the Early Registration of Volunteers which allows for the verification of health and medical professional credentials. K-SERV was created and is managed by the Kansas Department of Health and Environment (KDHE).
